

What I Done in Assignment

I completed 8 pages of design. I need to create 8 more pages, but I completed them as per the Figma design. There are just little differences in some pages, but they are fixable if I get the chance to complete the assignment. I needed 2 more hours to complete that, but the time was over. So what I need to complete I mentioned below, and also how you can start the project in your local host. I added the description.

[File structure is not good because I made it in hurry]

How You Can Start the Project

- Download the ZIP file to your computer.
 - Open it in any code editor like VS Code.
 - Start with **index.html** file, then wait for the first page to load (loading time is about 2 seconds).
 - After it loads, the **Welcome page** will show. Then click on the **Continue button**.
 - If some pages are not showing, you can open them individually, because to add that page I have to complete all pages and then add the button.
-

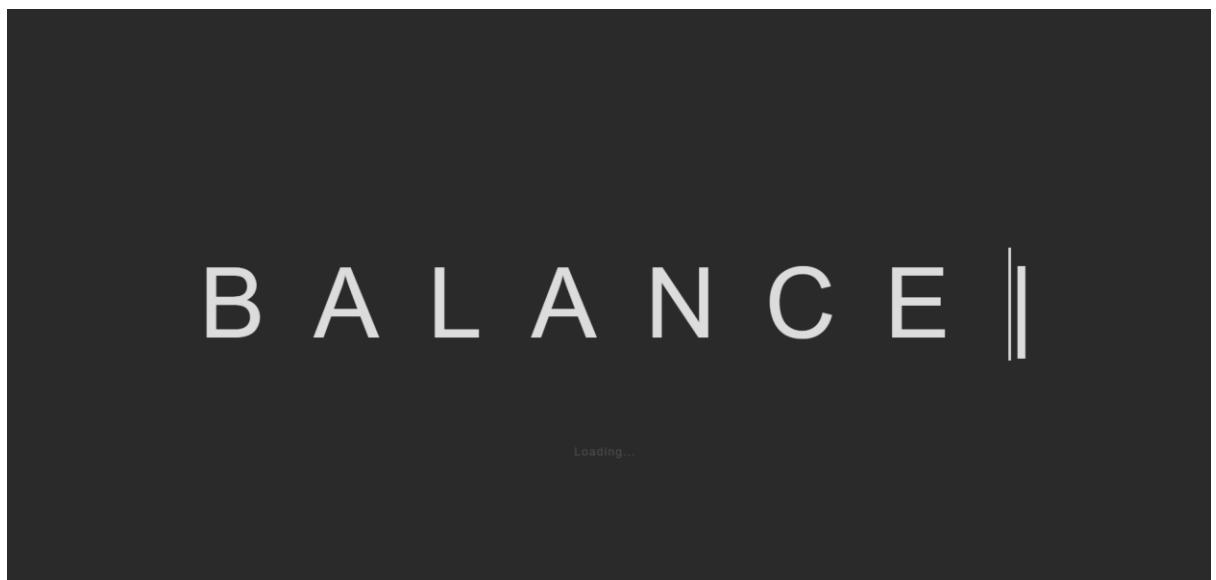

What I Added

1. Page similar to Figma.
 2. JS functionality to open and close (it might not work on some pages because I didn't add it there).
 3. Selection functionality in dropdown menu.
-

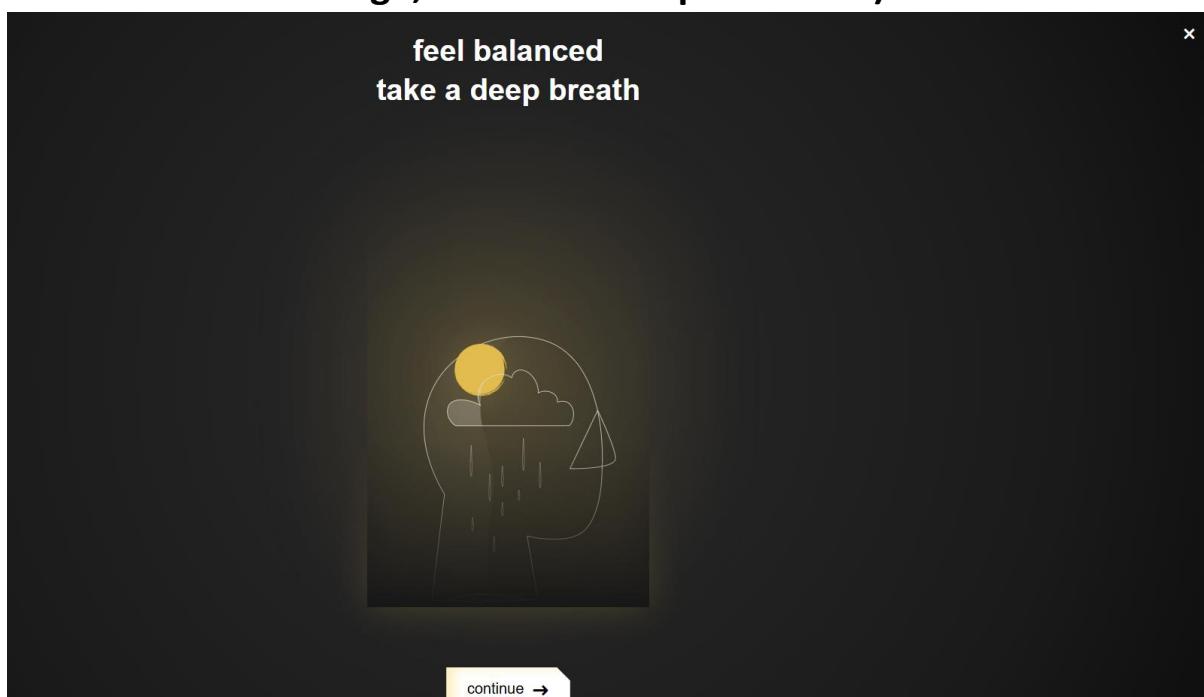

What Is Remaining to Complete

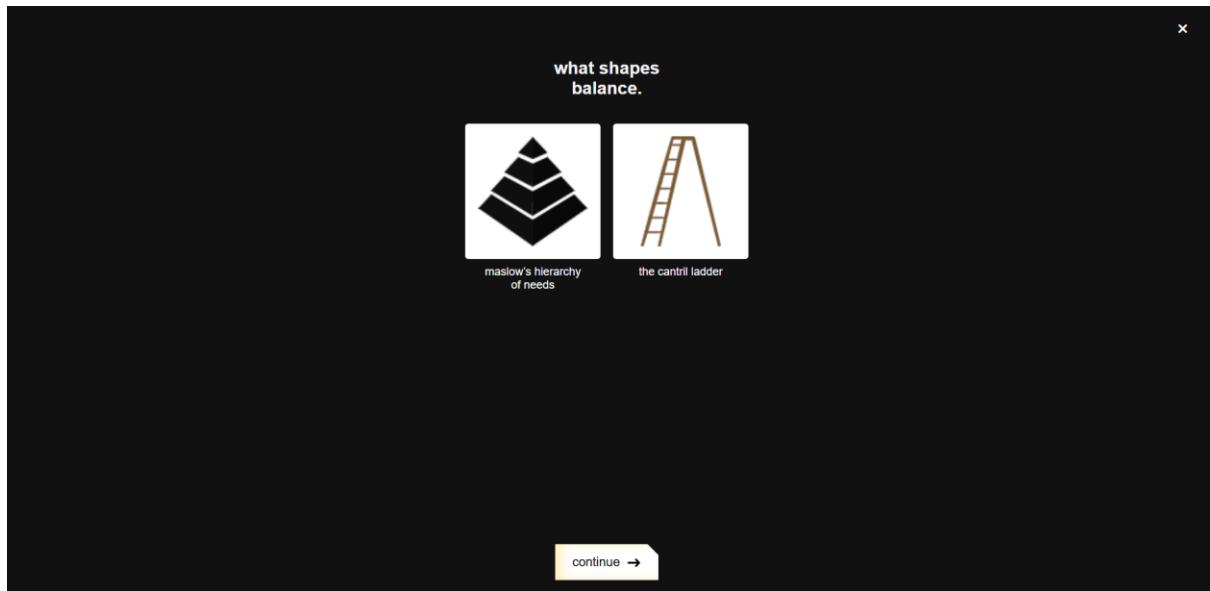

1. Some more pages.
2. Functionality to calculate happiness, sadness, etc. It needs data to process. I have to give all this input to AI APIs to process, then based on selected data it can give full detailed output.
3. Some UI needs to be corrected, like the **name page** where I need to put a name. It is not fully complete, so I have to finish that.
4. **Welcome page icon** needs to be corrected, because the icon or logo has to match the background color.
5. . Need to make graph char bar page to showcase all output it can done after all page is done

completed task first loading page

Welcome page (it needs more work, like the background color and logo part are not matching. It looks like a different part and as if I added an external logo, so it needs improvement).

This page need some work on selection dropdown button

maslow's hierarchy of needs

Maslow's Hierarchy of Needs shows how we grow from survival to our highest potential. It starts with food, water, rest & safety, then moves to love, belonging & esteem, where we build connection, respect & self-worth.

how it works?

Physiological Needs

Basic survival needs: air, water, food, shelter, sleep, clothing, reproduction.

Select your physiological needs:

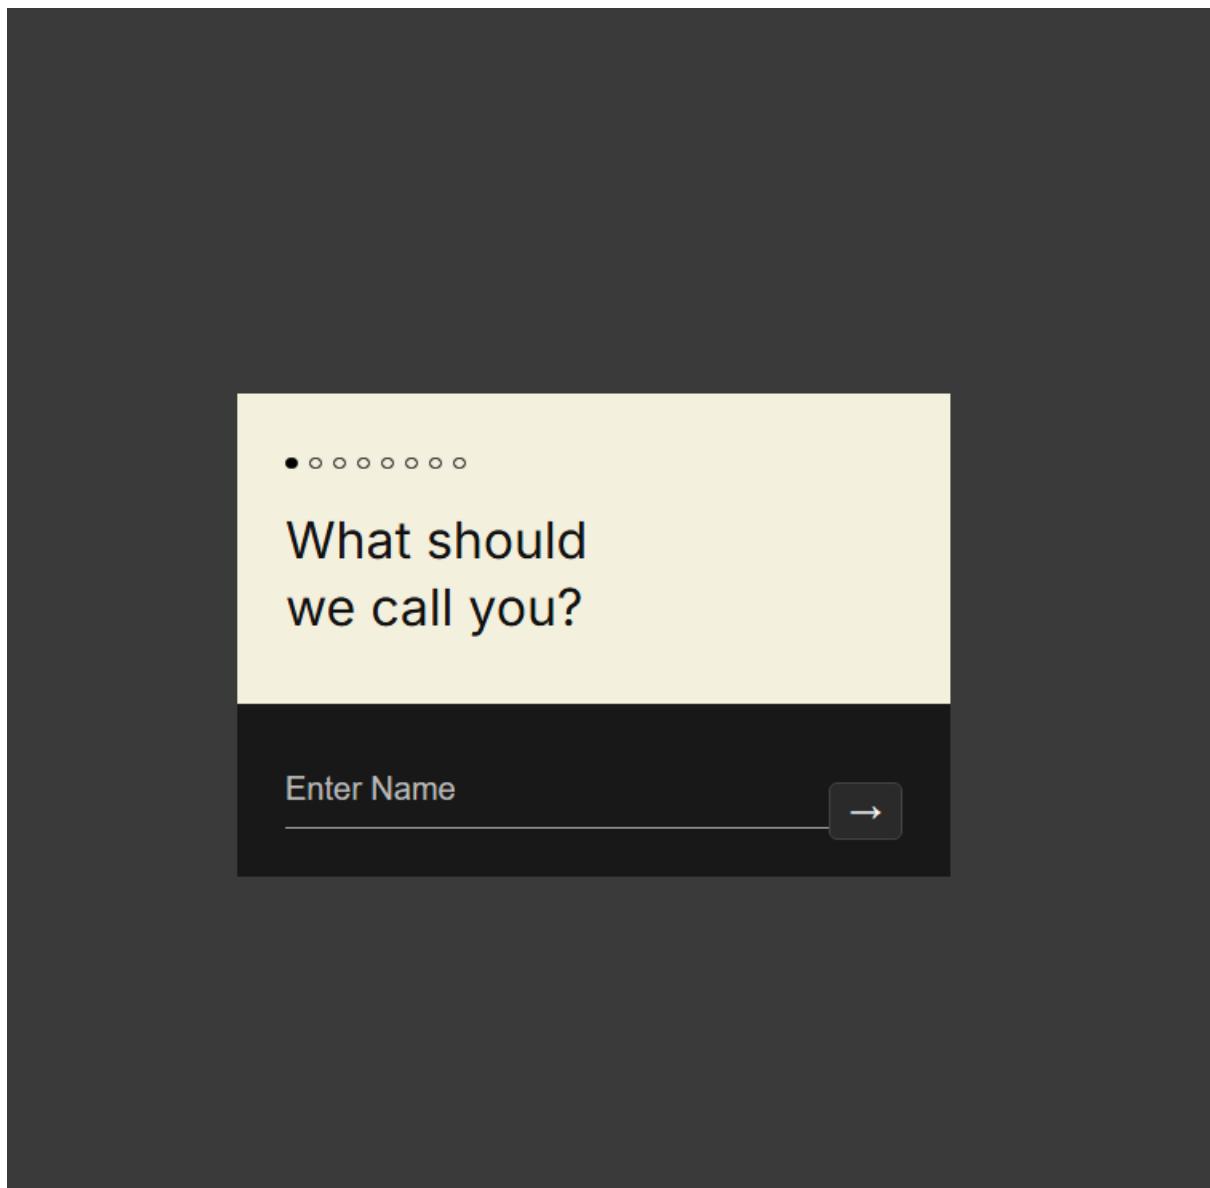

-- Choose --

Safety Needs

Belonging And Love Needs

The page is a dark-themed informational page about Maslow's Hierarchy of Needs. It includes a main heading, a descriptive paragraph, and a section titled "how it works?". This section contains a dropdown menu for "Physiological Needs" which lists basic survival needs: air, water, food, shelter, sleep, clothing, and reproduction. There are also sections for "Safety Needs" and "Belonging And Love Needs".

In this page I have to make same size as Figma design so it also need work

loading page is almost done just I have to add vertical line in support icon
